## **Environmental Problems: Remedies**

Dr. Jadhawar B.D. Dept. of History Balbhim College, Beed

#### Abstract:

There is one common problem facing everyone in the world today, they are environmental problems. The increasing population and pollution due to the industrial revolution, due to the constant increase in the urban population and pollution has increased. Environmental problems are a local problem not only for a country but also for a global problem. Man, nature, and nature have suffered immense damage. Many of the problems, environmental imbalances and remedies that will arise will be discussed in this research article.

Keywords: Environment, Causes of Environmental problems and Remedies

#### Introduction:

Various people of different religions are living in different parts of the world as well as in the nation. Go Earth Many natural disasters, catastrophic attacks on the citizens who have given them space to build, develop. Like floods, droughts, earthquakes, lightning, pests and contagious diseases etc. These disasters cause a great deal of living and financial loss. Along with this natural disaster, man-made disasters have to deal with this. Human beings have made great strides through the development of resources, and technology available from nature. Environmental conservation is ignored in the interest of development. As a result, many problems and problems have to be faced by the people due to environmental imbalances. Humans are responsible for environmental problems. The love of humankind today is diminishing. Likewise, the relationship between human nature and tree trunks is declining. As a result, environmental imbalances lead to many environmental problems. It is adversely affecting human life, climate, rainfall.

#### Objective and Research Methods:

To study the Environment problem and it's remedies. The present research paper I use descriptive and analysis research methods and secondary data.

### Environment, Causes of Environmental problems:

It is generally called the environment around us. It contains all the elements that surround us. The area around us is the gathering of trees, birds, animals, humans, land, water, air, jungle, mountains. All of these factors need to be considered together in the environment. Because all these factors depend on each other. Today, the world has to deal with environmental problems, temperature rise and environmental equilibrium, and all the elements of the earth are facing it. Along with tree cutting, industrialization is the cause of environmental degradation. Due to industrialization, toxic gases and chemicals from a large number of factories are mixing water, waste, plastic in the atmosphere. Acid rain, plastic rain, viral diseases, etc. At the same time, it is increasing in the event of drought and floods. Although modernization has contributed greatly to the progress of humanity in modern times, it would not be wrong to say that this industrialization has been prepared to send crises against humanity and nature. Due to industrialization, various types of toxic gases are mixing in the atmosphere. So the oceans
