Abstract:

In countries that took advantage of the industrial revolution, it increased tenfold. There has been a lot of change in the living conditions of those countries, but they have paid huge social cost for this development. Uncontrolled development without any thought or planning is not sustainable, but over time it becomes more dangerous than beneficial. This is what human history has been saying. When the economy of any economy is booming, the society, nature and development of the system are not properly integrated, then the economy is completely destroyed. With development, neglect to empower the surrounding nature, environment and society, human beings are at a great disadvantage.

Keywords: Sustainable Development, SDGs, Indicate.

Introduction:

Since 1992, a United Nations conference has been held on behalf of the United Nations globally, and accordingly it is proposed that development should be sustainable development and at least cost to the community, without any further development. Sustainable development is the development that future generations will not have to pay for it while meeting the needs of today's society. Just as human culture is important to diversity, biodiversity is important to nature. The idea of sustainable development is important not only economically, but also morally, intellectually and environmentally. Economic development is the priority of social sector development in sustainable development. Economic development, social development and environmental promotion are the pillars of sustainable development. To achieve the goal of sustainable development, there is a need to *Sabka Saath, Sabka Vikas*, important of the five elements of people, earth, prosperity, partnership and peace.

Concepts of Sustainable development:

The Silent Spring book written by the scientist Rockall Carson, he presents the first thoughts on sustainable development in the environment, economy and social. The concept of sustainable development was first used in the 1987 report by the Brundtland Commission on Our Common Future. He said that development work is necessary considering the needs of the present generation and future needs in sustainable development. They called sustainable development, 'sustainable development, which means the ability to meet the needs of the present generation without compromising any form to meet the needs of future generations'. Brundtland Commission Of United Nations to address the issue of global warming, deforestation, natural disaster, illegal poaching, pollution, full fishing, impact of War and misuse of natural resources etc¹.

Sustainable development is the development that meets all the needs of the current generation without harming the environment while maintaining the capacity of the environment to meet the needs of future generations. Technology must be renewed for sustainable
