### ABSTRACT

Group farming management play an important role in agricultural development. Prime Minister s development scheme and Maharashtra skill development organisation Launched Chhatrapati Rajaram Maha Entrepreneurship and skill development programme. Give training to farmers because today's farmers face many problems and challenges. Group farming management include pre-plan design, recorded skills members, members responsibility, planning for meeting, daily work entry, record book, buyers and sell negotiation, demand and supply, terms and conditions in contract, sale of goods, combined group s advantages, Group management committee, share members knowledge, Use of new technology, planning, organising, financial management, marketing management etc.

Keywords: Group farming concept, Management, Agricultural Development

### GROUP FARMING CONCEPT

"Group of farmers come together to save cost for farm works using latest technology, increase production, processing of goods, getting right price of the product and increase profit. This is main concept of group farming."

### NEED OF GROUP FARMING

In personal farming system all farm works seeds, fertiliser, Purchase of machinery and implements, payment labour all such type of work need to pay maximum money. At this time its very difficult to get good rate products in the markets. Group farming required for to combined transport, for combined purchase of tools, implements, Searching good market, getting good rate of product. because of that reasons small farmers come together and create farming groups this is today's need. In group farming above 10 farmers is needed. No limit but minimum 100 acers area is needed. Selected one crop is suitable for group. This is training program to small farmers increase their profit. Group farming is very important for farmers to achieved maximum profit.

### GROUP FARMING MANAGEMENT FOR COTTON CROP

Group farming management is very important for farmers. Group farming management play important role in successful farming.

Group farming Management need to follows below steps.

#### Following points are very important in managing farming activities

##### Create pre-plan for group farming

Progress of group farming in right way firstly create pre-plan works design and implementing related work. pre-plan design list of all important work in group farming should be create and every work implement detail action plan. Responsibility of programme implementing accepted by members of group as per their experience and skills. Group farming members and co-ordinator records member experience and skills, distributed responsibility among the members. when to complete some work problems faced that time give special training to some members.

##### Members Skills recorded

In group farming every farmer working some interested area and as per their skill works. Work distributed among members as per their experience to perform work successfully. Efficiency toward work should be increased. Some important work list such as tools and machinery maintenance, market and market management, financial management, from seeds to crop process work, Cultivation, Weeding, Thresh etc. Purchase seeds, fertiliser, driving tractor, negotiation skill, dealing skill, writing balance sheet, management of water all such type work need skills and experience to perform work.

##### Responsibility of group farming members

Members take responsibility as per their choice and experience. This is responsibility of Every member working honestly and give 100% efficiency toward work. Group efficiency increases. This is responsibility of group members that completed all fixed work as per timetable.
